

Get on the fast track to productivity

Machine operators like the benefits of rubber tracks over traditional all-steel undercarriages. They can go from concrete to sod with much less disturbance than their steel-tracked rivals.

Order John Deere rubber tracks for your CTL or compact excavator today. See your John Deere dealer for complete details.

This literature has been compiled for worldwide circulation. While general information, pictures, and descriptions are provided, some illustrations and text may include finance, credit, insurance, product options, and accessories NOT AVAILABLE in all regions. PLEASE CONTACT YOUR LOCAL DEALER FOR DETAILS. John Deere reserves the right to change specification and design of all products described in this literature without notice.

All-Makes Rubber Tracks

For Compact Track Loaders
and Compact Excavators

JOHN DEERE

www.JohnDeere.com

Key benefits of John Deere all- makes rubber tracks:

- CTL tracks employ forged-metal-embedded tracks with high bending strength and a one-piece tread that's more durable than cast rubber.
- CTL tracks are fortified with forged-metal imbeds for better durability than cast-metal imbeds.
- A single piece of tread rubber makes up our CTL track — much more durable than multiple-piece track.

Cat-style ASV tracks are also available

Not every “all-makes” provider stocks ASV tracks, but Deere has them, and they are of exceptional quality. These non-metal-core rubber tracks are constructed of a premium-quality rubber compound. A patented directional-tread pattern means more productivity and uptime. Put these on your Cat or ASV machine for ultimate performance and longevity.

Count on these ASV tracks to deliver:

- A directional-tread pattern for advanced traction.
- Tried-and-true performance, proven through thousands of satisfied customers.
- Superior flotation, a higher ride, and less undercarriage debris buildup via a patented lug design — it adds up to extended undercarriage life.

◀ Compact excavator and ASV-style tracks are constructed of a unique rubber compound for superior ability to withstand abrasions, chips, and cuts.
